

Mid Term Assignment

Build a resume upload portal using spring boot and thymeleaf framework

1. User Access:
 - Create User Registration form
 - User data should be stored into mysql table with name user
 - Create User login Form
 - After Login User should be able to access resume upload page
 - Resume uploaded should be stored in local directory(static) and save the file link in the user table
 - Maintain user login status with http session

2. Admin Access:
 - Create new controller for admin
 - Admin will have a view page where all the resumes will be visible in the table along with a link to the uploaded resume.
